**Subject:** Corporate welfare has to stop

Dear Commissioner,

The current net metering system is hurting my family and others in Arizona. We know that while solar customers create energy, they still need transmission, integration, distribution, and more from APS. When they don't pay for those services, the rates we pay go up, and the situation is getting worse every day. Furthermore, the current net metering policy requires us to pay five times the market value for their excess power.

We support consumer choice, but those who choose not to install solar panels shouldn't have to pay for those who do. Forcing hardworking Arizonans, particularly those on fixed incomes and with less means, to subsidize out-of-state solar corporations is the worst kind of corporate welfare. Please support net metering reforms that will ensure fair rates for all customers.

Thank you,

Harry Bradford

We know that solar customers create their own energy, but they still rely on the energy grid to ensure they have power whenever they need it. When they don't pay for that service, the rates we pay go up. Furthermore, the current net metering policy requires us to pay five times the market value for solar customers' excess power.

We know why solar companies are against net metering reform – their bottom line. Forcing hardworking Arizonans to subsidize out-of-state solar corporations is the worst kind of corporate welfare. We support solar power and want it to be sustainable in the long term. That's why rates must be fair to all customers. Please support net metering reforms that will ensure fair rates for all customers.

Thank you.

Bob Marlow

**Subject:** I'm tired of subsidizing solar power

I forgot to mention something in the generated letter I sent earlier. If a solar customer wants to avoid any APS fees, they should go off the grid - their choice though. Our family shouldn't have to pay for their ride. Please fix this ASAP.

-----  
Dear Commissioner,

The current net metering system is hurting my family and others in Arizona.

We know that while solar customers create energy, they still need transmission, integration, distribution, and more from APS. When they don't pay for those services, the rates we pay go up, and the situation is getting worse every day. Furthermore, the current net metering policy requires us to pay five times the market value for their excess power.

We support consumer choice, but those who choose not to install solar panels shouldn't have to pay for those who do. Forcing hardworking Arizonans, particularly those on fixed incomes and with less means, to subsidize out-of-state solar corporations is the worst kind of corporate welfare. Please support net metering reforms that will ensure fair rates for all customers.

Thank you.

When they don't pay for that service, the rates we pay go up. Furthermore, the current net metering policy requires us to pay five times the market value for solar customers' excess power.

We know why solar companies are against net metering reform – their bottom line. Forcing hardworking Arizonans to subsidize out-of-state solar corporations is the worst kind of corporate welfare. We support solar power and want it to be sustainable in the long term. That's why rates must be fair to all customers. Please support net metering reforms that will ensure fair rates for all customers.

Thank you.

Dear Commissioner,

The current net metering system is hurting Arizonans, particularly seniors and those on fixed incomes. We know that solar customers create their own energy, but they still rely on the energy grid to ensure they have power whenever they need it. When they don't pay for that service, the rates we pay go up. Furthermore, the current net metering policy requires us to pay five times the market value for solar customers' excess power.

We know why solar companies are against net metering reform – their bottom line. Forcing hardworking Arizonans to subsidize out-of-state solar corporations is the worst kind of corporate welfare. We support solar power and want it to be sustainable in the long term. That's why rates must be fair to all customers. Please support net metering reforms that will ensure fair rates for all customers.

Dear Commissioner,

\*\*\* Personal note \*\*\*

I am on a fixed income & because fuel has gone up in price, groceries have gone up in price; I currently choose between eating meat OR cheese from one grocery trip to the next. NOW, Obama is pushing energy policies that will drive up my air conditioning costs; when is this going to end?

Are any of you going to consider the "little man" or is it just a campaign slogan? Respectfully, Michele Henson

Dear Commissioner,

The current net metering system is hurting Arizonans, particularly seniors and those on fixed incomes. We know that solar customers create their own energy, but they still rely on the energy grid to ensure they have power whenever they need it. When they don't pay for that service, the rates we pay go up. Furthermore, the current net metering policy requires us to pay five times the market value for solar customers' excess power.

We know why solar companies are against net metering reform – their bottom line. Forcing hardworking Arizonans to subsidize out-of-state solar corporations is the worst kind of corporate welfare. We support solar power and want it to be sustainable in the long term. That's why rates must be fair to all customers. Please support net metering reforms that will ensure fair rates for all customers.

We already have more than enough taxpayer and rate payer subsidies that artificially increase the cost of new technologies that otherwise would not be economical. Propping up these immature technologies on the backs of non-users is a poor choice given today's economic realities and other energy options currently available. Please stand up for fairness and common sense to reign in these excessive costs.

Thank you.

Charles Preston

Dear Commissioner,

Please DO NOT support the position of the 60 plus association, which is an out of state organization calling itself Conservative. In my opinion, it is a shell organization supporting the position of Arizona Public Service on net metering.

They state that as a "rich" solar owner, I make 400% on all excess energy I produce. That is an outright lie. I am given a 6.187 cents / kwh credit for my excess production and APS sells that for approximately 11 cents / kwh. We pay for our usage of the management of power. We also reduce the operating cost of the utilities company by reducing their generation, delivery and loss of energy due to long transmission distances costs.

All the people that I know that have rooftop solar are senior citizens on fixed incomes. We did it because with net-metering, our long term costs are reduced. Remove net-metering to us and our investment becomes almost worthless.

Tim Lyon

The current net metering system is hurting Arizonans, particularly seniors and those on fixed incomes. We know that solar customers create their own energy, but they still rely on the energy grid to ensure they have power whenever they need it. When they don't pay for that service, the rates we pay go up. Furthermore, the current net metering policy requires us to pay five times the market value for solar customers' excess power.

We know why solar companies are against net metering reform – their bottom line. Forcing hardworking Arizonans to subsidize out-of-state solar corporations is the worst kind of corporate welfare. We support solar power and want it to be sustainable in the long term. That's why rates must be fair to all customers. Please support net metering reforms that will ensure fair rates for all customers.

Thank you.
